

Yahia Arafat Subhi Matar

Software & Mobile Developer

Amman, Jordan | yahyamater9@gmail.com | +962788460070 | <https://github.com/yahya-mater/>
<https://portfolio.futureisnow.site/> | Languages: English (Professional), Arabic (Native)

PROFESSIONAL SUMMARY

Software & Mobile Developer (Flutter, JavaScript, C#) with hands-on experience delivering production-grade software for commercial and institutional clients. Specialized in building cross-platform mobile apps, offline-capable desktop solutions, and web automation tools currently used daily across multiple Jordanian schools and businesses. Proficient across the entire application lifecycle—from designing RESTful APIs and local database architectures to deploying multi-domain web applications and native desktop wrappers.

EDUCATION

B.Sc. Smart Device Computing 2026
Tafila Technical University | Tafila, Jordan
Coursework covered smart device architecture, mobile computing, and software systems. Applied academic knowledge directly in freelance projects throughout the degree.

TECHNICAL SKILLS

Languages	JavaScript, C#, Dart, Python, Kotlin, SQL
Mobile	Flutter (Cross-platform), Kotlin (Android Native)
Backend	Django, Flask, ASP.NET, REST API Design
Frontend	JavaScript, HTML5/CSS3, Browser Extension APIs
Desktop	C# / .NET (WinForms, WPF)
Databases	MySQL, SQLite, SQL Server
DevOps & tools	Git, GitHub, Docker, Linux/CLI, Nginx

SOFT SKILLS

- Client Communication & Requirements Gathering
- Independent Problem-Solving
- Project Ownership & End-to-End Delivery
- Time Management & Multi-Project Handling

- Adaptability (cross-domain: education, government, business)
 - Attention to Detail
 - Self-Directed Learning
-

PROJECTS & FREELANCE EXPERIENCE

School finance management system

Commissioned & paid

Web application + browser wrapper | JavaScript, REST API, SQLite

- Designed and built a finance management platform for Jordanian schools, used daily by headmasters
- Features include budget tracking and exportable reports
- Delivered as both a web application and a packaged browser wrapper to support offline use
- Sole developer — handled requirements, design, development, and deployment independently

Government data automation tool

Commissioned & paid

Windows desktop app + browser extension | C# / .NET

- Built a desktop application paired with a browser extension to automate data collection from a government portal
- Auto-generates official teacher documentation and headmaster statistical reports, eliminating manual data entry
- Used regularly by teaching staff and school administrators across multiple schools

Service & product showcase platform

Live — <https://www.futureisnow.site/>

Web platform with 3 sub-applications

- Designed, built, and maintains a live website for displaying and advertising products and services
- Includes 3 browser-based applications hosted as subdomains, extending core site functionality

Browser extensions & automation scripts

JavaScript, Python

- Developed multiple browser extensions and automation scripts to streamline repetitive workflows
- Built custom Excel formula tools and scripting utilities used in client deliverables
- Leveraged personal tooling to deliver client projects faster and with higher consistency
